

Notes

object

كل شيء في JS data هي structure
Key : Value
name : "Matilda";

Access object Data

Dot Notation
user.name

البريد
والاسم

Bracket Notation
user["name"]

space لا Key
Dynamic

Nested object → object في object

```
let user = {  
  name: "Matilda",  
  age: 22,  
  skills: ["HTML", "CSS", "JS"],  
  addresses: {  
    ksa: "—",  
    egypt: {  
      one: "—",  
      two: "—"  
    }  
  }  
};
```

لو انا طالع انا

user.name

user.addresses.ksa

user.addresses.egypt.one

user["addresses"]["egypt"]["one"]

Notes

Create object:

```
let obj = {  
  name: "Matilda"  
};
```

} literal

```
let obj = new Object();  
obj.name = "Matilda";
```

} new

```
let obj = Object.create(-);
```

} Object.create

```
let obj = Object.assign({}, { - });
```

} Object.assign
merge objects

This is object reference
Current object

this age for example
